### Released 25<sup>th</sup> August, 2023.

Updating to this firmware does not require instrument revalidation.

8890A 2.7.1.2 firmware was released as a Hot Fix to resolve one issue.

The firmware was to fix an error with an 9000/8797 Headspace sampler combination. The error "Waiting for Shutter" was reported.

The fault was an erroneous one that would occur during a sequence which would then abort with the Shutter error.

In all instances the issue was not related to the Shutter but, in most cases, a failing inlet Prerun flow test.

The firmware was not released to manufacturing and only delivered to customers that reported the issue.

This Hot Fix will be included in all future firmware revisions such as 2.8.0.219

### Firmware Version 2.8.0.219

### 2.6.0.303 9000 Firmware.

Released December 20022

A handful of 8890 GCs may have been released with the above firmware. This firmware is identical to version 2.6.0.306 with the exception of one fix for oven zero cross. This fix was leter removed from 2.6.0.306 due to quality concerns causing premature oven failures when customer power is poor. We have chosen not to display this firmware on A.com.

### 2.5.1.9 8890 Firmware.

Released October 20, 2022

http://download.chem.agilent.com/firmware/9000\_FW\_2.5.1.9.tgz.gpg To download this version, use GC Firmware Update Utility 2.6.3.0 or greater. Updating to this firmware does not require instrument revalidation.

Service Note Number: D00

Issue Id	Current Behaviour	Resolution
043399	ALS starts to prepare for run when oven is in standby mode	Issue corrected
043539	Certain EPC modules can have EEPROM ID Code corruption after power cycle - and module is no longer recognized by GC	Issue corrected

### 2.5.0.258 9000 Firmware

Released May 20022

http://download.chem.agilent.com/firmware/9000\_FW\_2.5.0.258.tgz.gpg To download this version, use GC Firmware Update Utility 2.6.3.0 or greater. Updating to this firmware does not require instrument revalidation.

Issue Id	Current Behaviour	Resolution

042393	Unable to turn off PCM backpressure during run	Run Time event added to turn PCM backpressure off during run.
042593	1000600a error reported	Issue caused by incorrect column configuration. Issue fixed.
042787	Excessively high flow coming out of the FID during inlet maintenance when using H2 as the carrier gas.	Inlet maintenance now works using the following steps.  Splitting: Column Flow of 4mL/min with high split flow (controls in forward pressure and split vent is opened via a set duty cycle to avoid building up inlet pressure) to purge the inlet volume (26 seconds)  Pressurizing: Splitless mode with 5mL/min column flow (or the user method column flow, whichever is higher) to build up pressure in inlet (20 seconds)  Purging: Keep the settings if under control, otherwise lower the column flow. Hold for 3 void times, capped at 15 minutes.
		The exceptions to these rules are as follows:
		<ul> <li>If there is no column installed on the inlet, only step one is performed</li> <li>If a MSD is connected, steps 2 &amp; 3, use constant flow of 4mL/min instead of high pressure</li> </ul>
042975	Multiple failure reports that 8890 inlet EPCs failed for pressure decay test	Problem caused by misunderstanding regarding the septum purge valve. New

instructions being supplied to
the Pressure Decay Test
procedure.

### 2.0.2.8 9000 GC Firmware

Released January 2020

Updating to this firmware does not require instrument revalidation.

Changes/Fixes made since the last version. (2.0.0.391)

### Issue ID Title

037664 Sequence aborted by rear injection timeout.

037804 Intermittent ALS remain in busy state and sequence aborted with GCMS system.

037892 Not Able to communicate with the Injector

038025 GC not waiting for readiness prior to injection. Using an 'external device' to hold the system not ready, the instrument will not wait for readiness (i.e. wait for GC to become ready) before injecting a sample.

038027 BUI does not wait for readiness to begin sample prep. (related to 038028)

038028 Cannot start run from BUI.

038095 Variable function of plunger speed cannot be set and jump back to fast/slow automatically.

### 1.0.6.1 9000 GC Firmware

Initial release February 2019.

# 8 Firmware Update Program.

It is not possible to downgrade firmware from revision 2.X to revision 1.X The GC firmware update program is supplied as part of the Firmware Update Package.

Always use the latest version of the update tool. The current FW update Utility is 2.10.7

After the program has been loaded and executed the following screen appears.

This enables the user to select which instrument type needs to have its firmware downloaded. In this case we select the GC and ALS.

The 9000 GC is chosen from the Product menu.

The next screen allows us to either modify firmware or PID values for the EPC modules.

Firmware update is selected.

After choosing to update firmware, you must then enter the IP address of the 9000 that you wish to connect to and then press Connect.

Information such as current installed firmware will then be displayed.

### Press Update.

A Windows Explorer directory will then appear and you must select the firmware revision that needs to be downloaded.

If the required firmware version is not displayed then you can "browse" your harddrive to find it.

The firmware file has the structure 9000\_FW\_X.X.X.tgz.gpg

After you have selected the correct file the firmware will automatically be downloaded.

After the download is finished the GC will reboot and the firmware update is complete.
