# Make Your Mass Spectrometry More Powerful

Special upgrade promotion: Agilent MassHunter software

There's never been a better time to upgrade to the latest MassHunter software for GC/MS and LC/MS systems
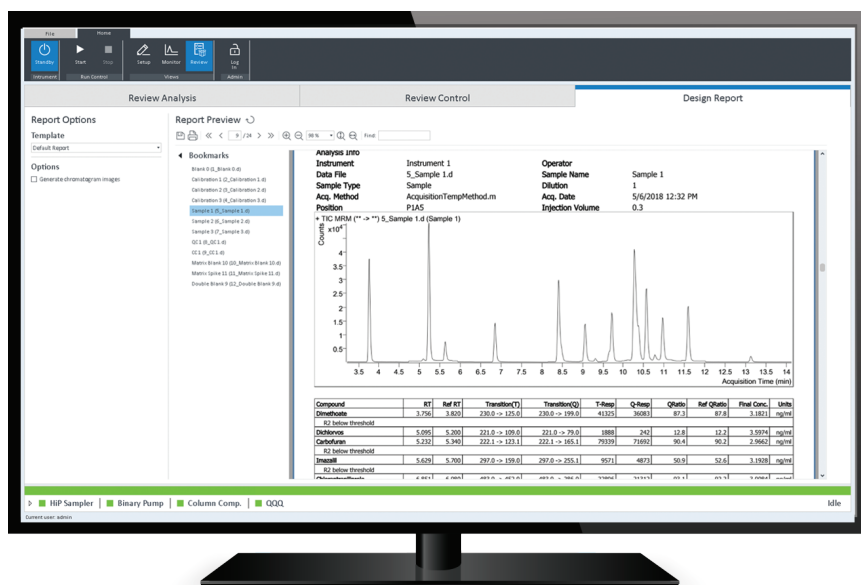

Here's what's new:

– Agilent MassHunter Acquisition for LC/TOF and Q-TOF, Quantitative Analysis, and BioConfirm now contain technical controls to support 21 CFR Part 11 and Annex 11 compliance.

– A common Control Panel is shared across the three programs that allows the setup of user roles, user permissions, audit trails, checksums, and secure content management across all software modules. These advanced security features and built-in technical controls minimize security risks while helping to preserve the integrity of the data.

– MassHunter Acquisition for LC/TOF and Q-TOF now fully controls Agilent's 2D-LC system.

– MassHunter Acquisition for 6400 Series LC/TQ includes compliance feature enhancements including support for ECM 3.5/3.6.

– MassHunter for GC/MS systems now supports the 8860 and the innovative 8890 GC.

– GC/MS MassHunter includes compliance feature enhancements including support for ECM 3.5/3.6, support for QuickProbe for GC/MSD systems, and CI source support for GC/Q-TOF.
